

RFID blocker card is the size of a credit card that is designed to protect personal information stored on high frequency (13.56mhz) smart cards, such as credit cards, debit cards, identification cards, passports, membership cards and so on.

RFID blocker card needs no battery. It draws energy from the scanner to power up and instantly creates an E-Field, a surround electronic field making all 13.56mhz cards invisible to the scanner. Once the scanner is out of range the RFID blocker card de-powers.

Simply carry this RFID blocker card in your wallet and money clip and all 13.56mhz cards within range of its E-Field will be protected.

Features:

- RFID credit card protection
- No Need For Batteries & Chargers
- Take it anywhere with you
- Convenient & easy to use
- Easily fits in your wallet
- Great gift for promotion or advertisement

Product Specification:

Product Name	RFID blocking card
Material	PVC+Blocking Module
Size	85.5*54*1.2mm
Surface	Glossy, matte or frosted
Craft	UV spot, silver/golden hot stamping
Printing	Offset printing or digital printing
Blocking Frequency	HF/13.56mhz, NFC
Packaging Details	1 pc/opp bag, 900 pcs/ carton, carton size: 50*22.7*32.3CM, weight: 18.65KG
Lead Time	12-15 working days based on quantity
