Production process of Silicone RFID Wristband

Production process

The RFID Silicon wristband is designed for personal identification applications such as access control for amusement parks, concerts and conferences, recreational venues, museums, exhibitions and more. The wristband's style and materials make it particularly suitable for saunas, swimming pools, spas and other high humidity environments. Easy clean characteristics also make it suitable for food processing areas, etc. RFID wristbands can enable collection of data, control access to areas or services or drive interactive displays, promoting visitor engagement and providing valuable data to event organisers.

Printed silicone wristbands are a great way to raise awareness for charity. Alternatively, you can print your favourite slogan and band names. Silicone bands are great for parties, fundraising or just making a statement.

We can create custom printed RFID silicone wristbands with an embedded RFID chip. Our silicone RFID wristbands can operate with any RFID system, from any system integrator. These wristbands are ideal for social media integration and cashless payments.
